

reactions, and many instrumental techniques. . A schematic of a typical gel electrophoresis apparatus is shown in Figure 2. Western Blot assays used to interpret data from protein analysis with gel electrophoresis. Similarly All immunochemical methods are based on a highly specific and sensitive reaction between an antigen and an antibody. Anti- gen is a. Lithium dodecylsulfate/polyacrylamide gel electrophoresis of reinhardtii/Pisum sativum/photosystem II reaction centers/absorption spectra/immunochemical techniques) . analysis, a thylakoid membrane sample (4 mg of chlorophyll). Methods for the physicochemical characterization of antibodies and other proteins are often necessary in order to SDS Page Gel Electrophoresis (SDS- PAGE).
